# Combined products or product combinations?

## Device combinations

### Compresso C

Pressure maintenance combined with Vento VP degassing with integrated water make-up (P)

When it comes to developing multifunctional tools, the Swiss are known to be world leaders. The perfect example of this is the renowned Swiss Army knife. Pneumatex is proud to continue this tradition of multifunctionality in the field of water management. We are the only manufacturer in the world to be able to offer a wide range of top-quality combined products which meet every customer need with their variety of functions – whether in fixed charge, compressor or pump controlled pressurisation. These multifunction devices have an unbeatable price-performance ratio and their reliability and long lifecycle follow the tradition of legendary Swiss Pneumatex quality.

However, engineers like to use a specific “tool” for each task – even in the fields of pressure maintenance, degassing and water make-up. By using separate products perfectly attuned to each other, performance can sometimes be optimised still further and users benefit from the highest degree of user-friendliness and transparency. Compromises sometimes arise here in combined products. [▶▶ Extract Oxystop](#) | [Technical Guide Pressure](#) | [Technical Guide Air](#)

The mentality “saving money is always good” fools many people into making do with cheap products. However, in water management, the smartest and overall cheapest solution can only be found by calculating the Total Cost of Ownership. To do so, it’s necessary to consider all the factors and the relationships between them. [▶▶ Brochure Charta Principles of Dynamic Water Management](#)

Should you opt for an inexpensive combination device or a high-performance individual solution or using a combination of separate products? At Pneumatex, you can find a customised equipment design for every case.

### Transfero T

Pressure maintenance combined with Vento V degassing device and Pleno P water make-up fitting

## Combination devices

### Transfero TPV

Combined product for pressure maintenance (T) with integrated degassing (V) and water make-up (P)

### Compresso CPV

Combined product with integrated degassing (V) and water make-up (P)

## A world first: CPV

Until now, combined products were always designed as pump controlled pressurisation with additional functions. [▶▶ Extract Oxystop](#)  
Now Pneumatex becomes the world’s first manufacturer to be able to offer tried-and-tested compressor pressure maintenance with integrated degassing and water make-up. Planners or installers no longer need to tolerate any compromises. This adds value to the entire system and also benefits the end customers.

# Static, dynamic, fully automated...

## Device and fitting combinations

**Statico SD**  
Pressure maintenance combined with Zeparo separators

**Statico SU**  
Pressure maintenance combined with Zeparo ZIO air separator. Could also be combined with Vento V or VP.

“De gustibus non est disputandum” – There’s no accounting for taste. What the Romans wisely noted 2000 years ago when they invented central heating and water supply systems is precisely what we at Pneumatex continue to respect today. This is why we offer our customers the right products for every use philosophy. However, pressure maintenance, water make-up and air and sludge separation are complex topics which merit considerably more discussion within the industry. [▶▶ Technical Guide Pressure](#) | [Technical Guide Air](#)

After discussion there must be action: Our extremely well-trained technical advisors help you develop an individual solution that leaves no safety questions unanswered. In case you prefer to tackle the topic independently, the necessary information is available on our website. Here you can find everything from general product information to technical articles, circuit diagrams and assembly plans. A special highlight is our online planning software SelectP! – a unique tool.

Our brochures and manuals also supply you with all the basics and facts to enable you to develop optimal designs: From simple but smart solutions without auxiliary power to fully automated systems with interfaces to building control systems.

### Separators or pressure step degasser?

### Pressurisation system selection

**What ever you chose,  
you always make the right choice with Pneumatex!**

| swiss made | **Pneumatex – Dynamic Watermanagement**

Innovative system technologies from a single source: the Statico, Compresso or Transfero, in combination with the Pleno water make-up and Vento deaeration systems, allow fully automated operation, with connection to a central control system.
